ADDENDUM #2

The animals listed in Column E were utilized for safety or potency testing of this firm's products as specified in the following 9 CFR sections:

9 CFR	113.109(c)	<u>Clostridium botulinum</u>
	113.204(b)	Mink enteritis virus
	113.302(c)*	Mink distemper virus
	113.38	Guinea pig safety test

In addition, animal vaccination/challenge testing was performed for the following studies:

1. b4
2. Testing of b4, as specified in 9 CFR or our Outline for Production and approved by APHIS-CVB.
3. Testing of b4, as required by the 9 CFR and approved by APHIS-CVB.

Agencies that regulate the testing of biologics generally insist that these tests run their course without interference. In some instances, such as distemper efficacy tests, the symptoms may become protracted. In these cases, we do administer a euthanasia solution at an appropriate state to reduce pain and distress.

b6, b7c

\* 113.302(c) applies to mink and ferrets
