A total of fifty-five (55) cats were involved in testing procedures that involved pain and/or distress.

Eight (8) cats were used for testing done in accordance with 9 CFR MAFF for the *in vivo* potency testing of

Vaccines. These tests were and SOP 21-430-00 filed with products.

Forty-seven (47) cats were used in the production of a letter from [redacted] b4 b6, b7c b7d at the National Veterinary Services Laboratories (NVSL) has a virulent challenge virus that produces severe disease upon a single exposure...we strongly recommend that data be presented for our review from a single challenge with your firm's challenge virus and/or the NVSL challenge along with any other challenge models you propose. This data should be submitted for comment to our office before initiating any efficacy study." Although a certain degree of pain and/or distress was necessary for the expression of symptomatology, it was kept to a minimum and the option of euthanasia was used, when deemed appropriate, by the attending staff veterinarian.

Any pain and/or distress experienced by the cat was kept to a minimum limited only by the definition of the testing.
