- 1). Professionally acceptable standards governing the care, treatment, and use of animals, including approriate use of anesthetic, analgesic, and tranquilizing drugs, prior to, during, and following actual research, teaching, testing, surgery, or experimentation were followed by this research facility.
- 2). Each principal investigator has considered alternatives to painful procedures.
- 3). This facility is adhering to the standards and regulations under the Act, and it has required that exceptions to the standards and regulations be specified and explained by the principal investigator and approved by the Institutional Animal Care and Use Committee (IACUC). A summary of all such exceptions is attached to this annual report. In addition to identifying the IACUC-approved exceptions, this summary includes a brief explanation of the exceptions, as well as the species and number of animals affected.
- 4). The attending veterinarian for this research facility has appropriate authority to ensure the provision of adequate veterinary care and to oversee the adequacy of other aspects of animal care and use.

Registration No. 32-R-0023

Column E Entries

Dogs (7)

All seven dogs listed in Column E were used in required regulatory testing. All protocols for this testing were reviewed and approved by IACUC.

Six dogs experienced clinical signs of illness in immunogenicity testing required under 9 C.F.R. Part 113, which anticipates the possibility of death of animals on the study. In compliance with applicable regulations, animals experiencing clinical signs of illness due to testing were only treated or euthanized when the illness had progressed to a point when death is certain to occur without therapeutic intervention. (9 C.F.R. Part 117.4(e).) All animals were humanely euthanized as soon as possible after the end of the study.

One dog involved in a safety study for an exploratory compound experienced depression and unexpectedly died.
